

Move Request

Standard Operating Procedure

Mobile and desktop requestor workflow—from new request through dispatch

SOP ID	LMS-TRK-001
Effective date	August 6, 2026
Process owner	LMS Trucking / Dispatch
Audience	Requestors, dispatchers, trucking drivers, and administrators
System	LMS Imports — Trucking Move Requests

Document use: Follow this SOP when submitting a new trucking move. Screenshots use sample information and must not be copied into a live request.

1. Purpose

This SOP explains how to create a complete, dispatch-ready Move Request in LMS Imports. It standardizes required information, service-specific fields, validation, submission, status tracking, editing, and cancellation so dispatch receives enough information to schedule the work correctly.

2. Scope

Use this procedure for trucking move requests entered from the desktop application or the requestor mobile view. It covers request creation through submission and tracking. Dispatcher assignment, driver execution, signatures, tickets, and billing occur after the request is submitted and are summarized in Section 10.

Important: The trucking workflow supports operational monitoring and billing preparation. It does not by itself authorize users to post accounting entries in another accounting system.

3. Roles and responsibilities

Role	Responsibility
Requestor	Selects the correct customer, jobsite, service, timing, payment mode, email recipient, and move details; reviews all information before saving.
Dispatcher	Reviews unscheduled requests; assigns the dispatch date, trucking driver, and actual truck/equipment; may cancel with a documented reason.
Driver	Reviews assigned work, records permitted final details, captures required driver and customer signatures, and finalizes the task.
Administrator	Maintains service patterns, rate-sheet options, users, customer/jobsite master data, and equipment master records.

4. Before you begin

- Confirm you are using the correct login and have access to Equipment Request and/or Trucking Move Request as assigned.
- Collect the customer, project/jobsite, requested date, AM/PM preference, service type, payment method, and a working email address.
- For equipment or container moves, have the equipment identifier, plate/VIN/asset number, container/trailer number, size, and routing information available.
- If a master-data option is missing, contact an administrator. Do not select an inaccurate substitute merely to submit the request.

5. Create a new Move Request

5.1 Open the form

1. Open the Trucking module and select Move Requests. In the mobile requestor view, select Trucking Move Request.
2. Select New request. The New Move Request window opens.
3. If a tutorial button is available, select it for field-by-field guidance. Close or advance the tutorial when ready to enter data.

5.2 Confirm request identification

- Request # is generated by the system in the LMS-00001 sequence. Do not type over it.
- Entry Date is fixed to the date the request is created. It is not the requested delivery date.
- A new number should be used for each separate request. Do not reuse a prior request number.

5.3 Enter customer and contact information

4. Customer — select the customer from Customer Master. Verify the legal/customer name before continuing.
5. Project / Jobsite — type to search the available Fleet & Equipment jobsites/locations, then select the correct result. If permitted and the jobsite is missing, enter a new value; otherwise request administrator assistance.
6. Contact # — review the number populated from Customer Master, if available, and correct it when the request requires a different contact.
7. Requested Delivery Date — choose the date the customer wants the service. This is separate from the fixed Entry Date.
8. Email — enter the requestor/customer email that must receive notifications. Email is required. When a shared account such as request@lmsfm.com is used to log in, notifications still go to the email entered on the request.

New Move Request LMS-00001
Training example - no live request

Tutorial: tap this button any time for field-by-field guidance.

REQUEST # LMS-00001 ENTRY DATE 08/05/2025

CUSTOMER Select Customer Master

PROJECT / JOBSITE Search Fleet & Equipment locations

CONTACT # (671) 555-0123 DELIVERY DATE 08/10/2025

REQUIRED REQUESTOR EMAIL requestor@customer.com

Request number and entry date are generated. Customer, jobsite, delivery date, email, payment mode and move description must be reviewed before submission.

Snapshot 1 - Request identification and customer information

Figure 1. Request identification, customer, jobsite, contact, delivery date, and required email. Training example—sample data only; not a live transaction.

5.4 Enter delivery and routing details

9. Delivery Time — select AM or PM.
10. Trip Type — select One-Way (1×) or Round Trip (2×). Round Trip doubles fixed-rate charges only; it does not double an hourly rate.
11. Origin — search and select a jobsite/location when known. Origin is optional unless the selected service or operating procedure requires it.
12. Destination — search and select a jobsite/location when known. Destination is optional unless the selected service or operating procedure requires it.

5.5 Select Service Needed

Select the top-level service that describes the work. The form must reveal only the fields needed for that service. Complete every service-specific field that appears; hidden fields are not required for the selected service.

The screenshot shows a mobile application form titled "Move Details" with the instruction "Choose the correct service pattern". The form contains the following fields and options:

- DELIVERY TIME:** Radio buttons for AM (selected) and PM.
- TRIP TYPE:** Radio buttons for One-Way (1x) (selected) and Round Trip (2x).
- SERVICE NEEDED:** A dropdown menu showing "Container/Trailer Move".
- MOVE TYPE:** A dropdown menu showing "Chassis Move".
- SIZE:** A dropdown menu showing "40 ft".
- CONTAINER / TRAILER #:** A text field containing "CONT-12345".
- ORIGIN (OPTIONAL):** A text field containing "Andersen Housing".
- DESTINATION (OPTIONAL):** A text field containing "Port Yard".

Below the fields, a yellow warning box states: "Only fields required by the selected Service Needed should appear. Round Trip doubles fixed rates only, not hourly rates." At the bottom, small text reads "Screenshot 2 - Delivery, trip type and service-dependent fields".

Figure 2. Delivery time, trip type, service, and conditional service fields. Training example—sample data only; not a live transaction.

6. Service-specific requirements

Service	Fields that appear	How to complete
Equipment Move	Equipment lookup	Search Equipment Master by asset number, description, VIN, or plate number and select the exact equipment. Only an administrator should create a missing equipment record.
Container / Trailer Move	Move type; size; container/trailer #	Choose Sidelifter or Chassis Move; select 20, 40, 45, or Double Wide; enter the container/trailer reference.
High Deck Trailer; Highbed/Chameleon; Flatrack/Chameleon	Material(s); unit of measurement; weight (lb); dimensions	Describe the load accurately, select/enter the unit, and record total weight and dimensions for planning and safety.
Dump Truck; End Dump	Materials loaded; # of loads; CY/load; total CY	Enter loads and cubic yards per load. Verify Total CY = # of Loads × CY/Load.
Water Service	Configured water capacity	Select the configured capacity group, such as 0–1,000 gallons or 2,500–4,000 gallons, matching the rate sheet.
Roll Off Service	Bin size/capacity; tons when known; tipping fee	Tipping fee applies only to Roll Off. When tons are recorded, tipping is tons × rate; otherwise the configured bin-size basis applies.
Pump Service	Configured pump-service details	Complete the fields shown for the chosen pump service and explain the work in Move Description.
Waste Water Pump Services	Portable Toilets; Portable Sink; tank capacity	Select the requested unit or a configured tank capacity from 300 through 1,000 gallons in 50-gallon increments.

Service-Specific Examples
Complete the boxes that appear

Equipment Move
Search the exact equipment by asset number, description, VIN or plate.

High Deck / Highbed / Flatrack
Enter materials, unit of measurement, total weight (lb) and dimensions.

Dump Truck / End Dump
Enter materials loaded, number of loads and CY/load. Total CY is calculated automatically.

Roll Off Service
Select bin size/capacity, enter tons when available and choose tipping fee. Tipping applies only to Roll Off.

Waste Water Pump Services
Select portable toilet/sink or configured tank capacity from 300 through 1,000 gallons.

If the correct option is missing, contact an administrator. Do not use the wrong service just to continue.

Stepshot 3 - Service-specific requirements

Figure 3. Examples of service-dependent information. Training example—sample data only; not a live transaction.

Stop and correct: If the form shows fields for an unrelated service, or the correct option is missing, do not improvise. Save only after the selected service and visible fields accurately describe the move.

7. Payment, description, and submission

7.1 Select mode of payment

- Cash — select when the customer will pay by cash.
- Credit Card — select when payment will be by credit card.

- PO — select when the customer is using a purchase order. PO # becomes mandatory; enter the complete customer PO number.

7.2 Complete the Move Description

Move Description is required and is vital operational information. It follows the request into scheduling and the ticket. Write a concise but complete description that answers what is moving, where it is going, timing expectations, quantities, and any special instructions.

Good example: “Move one 40 ft container from Andersen Housing to Port Yard. Customer requests AM delivery. Contact site supervisor before arrival.”

Avoid: Descriptions such as “move,” “truck needed,” or “see customer.” They do not provide enough information for dispatch or the ticket.

7.3 Final review and save

- ■ Generated Request # and fixed Entry Date are visible.
- ■ Customer and Project/Jobsite are correct.
- ■ Requested Delivery Date and AM/PM are selected.
- ■ Required email is correct and belongs to the intended recipient.
- ■ Trip Type and Service Needed are correct.
- ■ All visible service-dependent fields are complete.
- ■ Payment mode is selected; PO # is present when payment mode is PO.
- ■ Move Description is complete and specific.

13. Select Save / Submit Request once.

14. Wait for the submission-success confirmation. Do not repeatedly press Save while the request is processing.

15. Close the confirmation or return to the Move Requests list. Confirm the request appears under Unscheduled.

Review and Submit
Final check before saving

MODE OF PAYMENT

PO *

PO # - REQUIRED FOR PO

PO-28130

MOVE DESCRIPTION - REQUIRED

Move one 40 ft container from Andersen Housing to Port Yard. Customer requests AM delivery.

The required email receives notifications. The shared request login is not automatically used as the recipient.

Save / Submit Request

Status after submission

- 1 Unscheduled**
Waiting for dispatcher assignment
- 2 Scheduled**
Date, driver and actual equipment assigned
- 3 Cancelled**
Preserved with required cancellation reason

Screenshot 4 - Final validation, submission and request status

Figure 4. Payment, required description, submission, and initial status. Training example—sample data only; not a live transaction.

8. Request status and tracking

Status	Meaning	Expected action
Unscheduled	Request saved but not yet assigned by dispatch.	Requestor/dispatcher may review or edit authorized details.
Scheduled	Dispatch date, trucking driver, and actual equipment have been assigned.	Dispatcher manages assignment; driver receives the task.
Assigned Driver	Task is visible to the assigned trucking driver.	Driver reviews details, records permitted final data, and saves progress.
Finalized / Ticket	Work is accepted with required driver and customer signatures.	The completed move appears in Tickets for operational record and billing preparation.
Cancelled	Move will not proceed.	Cancellation reason is required and the record remains traceable.

9. Edit or cancel a request

9.1 Edit

16. Locate the request in the correct status tab and select Edit.
17. Confirm the existing request number, signature/reference data, equipment lines, and entered information load before changing anything.
18. Change only the necessary fields, recheck the required email and Move Description, then select Save.
19. If existing lines or signatures disappear before you save, select Cancel/Close and report the problem; do not overwrite a complete request with a partially loaded form.

9.2 Cancel

20. Select Cancelled/Cancel Request from the request actions.
21. Enter a clear cancellation reason, such as customer cancellation, duplicate request, weather, or equipment unavailable.
22. Confirm the action and verify the record moves to the Cancelled tab.

Do not delete: Cancellation preserves the request history and reason. Use Cancelled instead of deleting a submitted transaction.

10. What happens after submission

- Dispatch opens the unscheduled request and assigns the dispatch date, a user configured as a Trucking Driver, and the actual truck/equipment from Equipment Master.
- The assigned driver sees the task in Assigned Driver, can save permitted progress and final operational details, and records the final ticket date where authorized.
- Both driver and customer signatures are required before finalization.
- Finalized work becomes a ticket. The ticket carries the jobsite, Move Description, service details, dates/times, and signatures.
- Billing amounts and tipping-fee calculations belong on the billing summary, not on the customer-facing operational ticket where the configured ticket format suppresses them.

11. Troubleshooting

Problem	Action
New request does not open	Refresh once, confirm module permission, then reopen Move Requests. Report persistent blank/non-opening forms with the time and user email.
Customer or jobsite is missing	Search using a shorter name. Confirm the record exists in Customer Master or Fleet & Equipment; request administrator creation if permitted.
Equipment or plate cannot be found	Search by asset number, plate, VIN, and a partial description. Confirm the latest Fleet & Equipment record has synchronized before requesting admin assistance.
Save does nothing	Review all required fields, especially Email, Move Description, delivery date, service fields, payment mode, and PO # when PO is selected.
Wrong fields are displayed	Re-select Service Needed. If unrelated fields remain, close without saving and report the service and screenshot.
Duplicate request appears	Do not submit again. Notify dispatch/admin and cancel the duplicate with a reason.

12. Quick-reference submission checklist

- ■ Generated Request # and fixed Entry Date are visible.
- ■ Customer and Project/Jobsite are correct.
- ■ Requested Delivery Date and AM/PM are selected.
- ■ Required email is correct and belongs to the intended recipient.
- ■ Trip Type and Service Needed are correct.
- ■ All visible service-dependent fields are complete.
- ■ Payment mode is selected; PO # is present when payment mode is PO.
- ■ Move Description is complete and specific.
- ■ Submission-success message appeared.
- ■ Request is visible under Unscheduled with the expected LMS request number.

End of SOP: For training questions or system issues, provide the request number, user email, date/time, selected service, and a screenshot to the LMS system administrator.
